(54) Title: CLOSURE TAPE TAB FOR AN ABSORBENT ARTICLE, PRELAMINATED CLOSURE TAPE AND METHOD OF MANUFACTURING THE CLOSURE TAPE TAB

(57) Abstract: The present invention relates to a closure tape tab (2) for an absorbent article, particularly for a disposable diaper, for fastening the article on the body of a person. The closure tape tab (2) comprises a proximal end portion (4) and a distal end portion (8) being connected by an inner tab portion (16), wherein the inner tab portion (16) has a first major surface (18) and a second major surface (20). The proximal and distal end portions (4, 8) are connected to the inner tab portion (16) at the first major surface (18) thereof such that opposing ends of the proximal and distal end portions (4, 8) are spaced apart from each other. An anti-adhesive means (26) is provided at at least a part of the first major surface (18) of the inner tab portion (16) in the space. The present invention furthermore relates to a prelaminated closure tape, preferably in a stable roll, from which such closure tape tabs can be cut. The closure tape of the present invention is adapted to be level-wound on a roll so that an increased amount of tape can be stored on the roll.
